PROPOSAL · BIKE RIDES · DROP-OFF

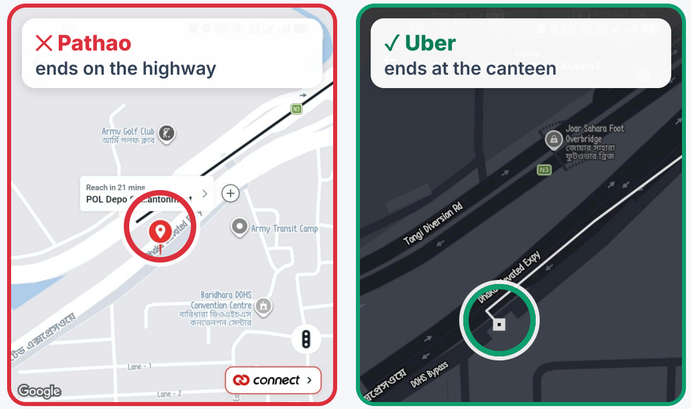

Syed Safwat Sameer
Product Owner · 27 Oct 2026

The pin is right. The ride ends on the wrong road.

Fix the last 100 metres and **stop losing daily commuters to Uber.**

1 THE MOMENT

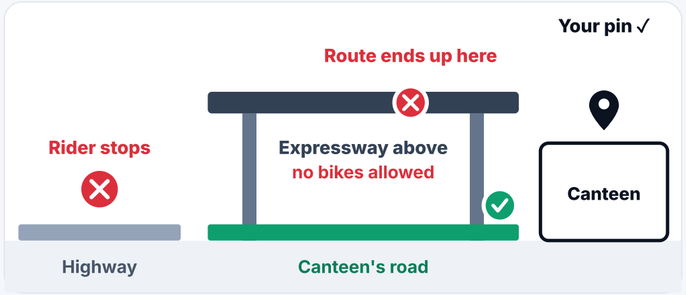

I pin my office canteen. The rider stops across the highway.

About 1 in 2 of my weekday trips. Same place, same time.

2 THE BIGGER CAUSE

Maps see one line. Bikes need the road below it.

Mohakhali · Moghbazar · Kuril · Jatrabari · Elevated Expressway

Same risk beside **flyovers across Dhaka**. Better GPS won't fix it: the pin is already right.

3 THE FIX: SMART DROP-OFF

End the ride where bikes can stop, and tell the rider the way in.

Ride ends on a road bikes can use
A server rule. No app update.

Your spot and tip, saved once
In your own words. Used on every trip.

Rider sees both before accepting
No calls. No guessing.

THE RIDER'S RIDE REQUEST

📍 **Canteen gate** · road under the expressway

💬 "Small road under the expressway. Canteen on the left."

Cheap to start
Step 1 ships on the server.

Proven idea
Food apps already send saved rider notes.

Easy to measure
How far rides end from the drop-off spot.

THE ASK

Approve a 4-week pilot in Dhaka

First, size it from trip logs and confirm the cause.

Sources: my own trips and screenshots (9:25 a.m.) · road data © OpenStreetMap · routes: OSRM. "1 in 2" is my own observation.
